Split Files is a simple tool that lets you split any file or folder. You'll just need to input the filename and, optionally, the number of parts you want the file to be split into. The tool is available for Windows 10 and later versions, and it comes with three file splitting methods, which you can choose from at the start of the process. You can choose to split a file by size, into a certain amount of parts, or a mixture of both. After you've decided on the type of splitting you're looking for, you'll be presented with the available checkboxes. Click on them to apply the changes or leave them unchecked. The

---

original file is automatically deleted after the splitting is done. If you want to join the files back, the same process is applicable. The only thing that changes is that you'll need to create a bat file instead of a small program. This is so you can join the parts automatically without any interaction. It's a simple and useful tool and can be used for multiple purposes.

**Split Files Key Features:** It can split your file into many parts automatically. It's available for Windows 10 and later versions. It has three file splitting methods: Size, Amount and Both. It automatically loads the original file after the splitting process is done. You can use it for two purposes: to protect your data by splitting your file into parts or simply
