Fix an infinite set of simple modules $\{M_i\}_{i \in I}$ for A (one can think of choosing a basis). There is a well-defined tensor product \otimes on the category of finitely generated left A -modules. Moreover, we have a canonical way to represent each simple module M as an A -submodule of $\otimes M$. Question: Does there exists a basis of M over k such that M is in "canonical form" in the sense that every nonzero simple A -module appears as a simple submodule in $\otimes M$ with nonzero multiplicity (equivalently, as a direct summand in the sum of A -modules $\oplus M_i$)? A: Yes! Write M as a tensor product of a finite number of simple submodules M_i , and assume $M_i \neq 0$. Then it is relatively easy to see that M_i is isomorphic to a direct sum of copies of M .
