Simultaneously working on multiple software projects can be quite a handful at times, especially if they are located on different development platforms. To your aid comes EinTOPF, a well-thought-out piece of software that makes it very easy for you to

manage all your software projects, containers, applications and logs under a single roof. It requires some third-party components to work. The application itself undergoes a typical and speedy installation process, but to use it as intended, you need to make sure certain prerequisites are present on your

computer's system:
Vagrant, Git and
VirtualBox. Please note
that the app offers to
install VirtualBox when
you first launch it, so
you do not necessarily
need to deal with that.
Simple and efficient
GUI EinTOPF's
interface can be best
described as minimalist
and this makes working
with it a very

straightforward process. In a few words, it features a top toolbar that enables you to switch between the Apps, Container and Projects sections, as well as a side panel and the main one that both allow you to manage or create new projects. Powerful development tools, all in one The application's highlight is

the fact that it bundles and combines some of the most powerful development tools. Vagrant makes it possible for you to create portable environments, Git can help you create distributed systems and packs advanced version control options, while Docker offers you all the means to build, run

and deploy apps to a wide array of platforms. Reduce the development time and streamline the process involved. As an ending note, EinTOPF is a capable piece of software that, if given the chance, will surely reduce the overall development time. It is not what you would call revolutionary, but it is

clearly worth more than the sum of its parts. It enables you to work on multiple projects and with various development tools, all at the same. And, as a bonus, it looks good, too. EinTOPF Full Version key features: Get rid of the tedious management of multiple projects and applications;
