- CreepWars is a build-your-own-tower game where you battle against a wave of creeps of increasing difficulty to earn as much gold as possible to improve your defenses. - CreepWars TD uses a unique damage system that allows you to choose which type of damage to deal to each creep. This enables to adjust your defenses towards different creep types. - The more gold you earn, the more units you can unlock to use in your defence. - Creeps come in different versions with unique abilities to stop you from winning against a certain number of waves. The more units you have equipped, the more powerful creeps are dealt with. - The game supports two campaigns: - King vs. King- Fight against another players for who has the best defense. - Blood vs. Water- Fight against your own players. As a human, you will try to defeat the orc players. - There are three win conditions: - Capped - You cap the waves with a specific amount of gold - Wins - You defeat a certain amount of waves - Losses - You lose a specific number of waves - There are three base damage types: - Piercing - The creeps will only take physical damage - Blunt - The creeps will only take blunt damage - Magic - The creeps will take magic damage over a period of time - Unit upgrades - Build a stronger defense by increasing the amount of upgraded units - Unit selection - Select different units with different attack and defense to counter upgrades of the creeps - Ability upgrades - Upgrade units abilities and keep them as a unique ability. - Four different victory conditions: - Hold out - You hold out for a set amount of time - To win - You defeat a set amount of waves - No losses - You never lose a wave - No wins - You never win a wave - A description of the creeps and an item list for each creep type is available in the in-game help. - Installing an alternative tile map is easy! - The game uses Lua coding and is made for Linux or Windows.
